

## ABOUT THE SCHOOL

Creating a student centric environment, with stress on imparting holistic education, is the basic philosophy of the school. We prepare our students to efficiently cope up with the challenges of life. It is this student friendly philosophy that has helped us get 355 students within a span of merely 4 months (April to July 2019).

While keeping academics as our main focus, the curriculum is planned to be a balanced conglomerate of co-curricular activities and sports which are given immense importance. Our lavish campus spread over 7 acres (approx) is home to facilities like outdoor sports (basketball, tennis, skating, football, athletics, taekwondo etc) and indoor sports (badminton, chess, table tennis squash), 2 indoor swimming pools, rich library, digital classrooms & infirmary to name a few.

To keep the students voluntarily involved the time table is designed in a way, that academics and activity periods get the required time and students get ample breathing space and remain enthusiastic throughout the day. It is this environment that fosters a feeling of belongingness among the students and they look forward to coming to school eagerly with increased output each day.

This happy environment leads to happy and effective learning of the students. It is therefore, that our students are making a thumping mark in Inter School Competitions and bringing laurels to the school. Be it debating, dramatics, quiz, science based competitions, sports or art, there is barely any zone that has not been explored and conquered by them.

When it comes to giving back to the society, our students are first out of the gate. In compliance with our initiative, 'Healing Heels', we donate old shoes/slippers to the destitute who roam bare feet on roads. This is entirely a student run initiative which ingrains in them a sense of social responsibility.

In our second initiative 'Readers on Board', we accentuate on the importance of reading. Every child carries a book in his/her bag, reads it while commuting to and fro school & during free time.

Keeping in sync with the philosophy of inclusive education, our special students study with the mainstream students. In our endeavour to sensitize the students towards their responsibilities, life skills are imparted to them.

They are sensitised in a way that well introduces them to the difference between their rights and duties thereby making them sound social beings. In order to enable students to use their talent and knowledge to contribute to a just and sustainable world, the school teaches environmental studies. Sex education is imparted to the students in the junior and senior level.

To train the teachers in important areas, they are consistently sent for workshops conducted by CBSE and other organisations of repute. To ensure that our teachers keep themselves in sync with latest trends in pedagogy, they are made to attend lectures & demonstrations that keep them abreast with what would be best in favour of the students.

Our stakeholders are given immense importance in Decision Making. The SMC Members attend regular meetings organised by the school & contribute in every agenda.

The Parent Teacher Meeting ensures that parents are in the loop for every minute details.
